Drones are being utilized in many ways across a variety of industries to help companies save money, improve safety, and enhance the efficiency of their operations. Drones also serve as an important tool for data collection in surveying and mapping and helping first responders in search and rescue operations.

Despite being a valuable tool, drones can be dangerous in the hands of bad actors and can pose a significant security threat. The potential use of drones in an attack against critical infrastructure, airports, stadiums, and correctional facilities is a growing concern for law enforcement, especially as the availability of drone technology becomes more widespread around the world.

At NSO Group, we understand this threat and are focused on making the world a safer place through our innovative counter-drone solution – Eclipse. Eclipse can detect and take control of Commercial Off The Shelf (COTS) drones and land them safely in a designated area, eliminating the need for harmful countermeasures that can inflict collateral damage. Earlier this week, we celebrated International [#DroneDay](#). Take this chance to learn more about our premier cyber counter-drone platform and contact us if you're interested in safeguarding your site: <https://lnkd.in/dmzXEVX>
